DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, drawn to a method of preparing a transgenic plant expressing a protein variant, classified in class 435, subclass 320.1.
 - II. Claims 27-31, drawn to a transgenic plant, classified in class 800, subclass .
 - III. Claims 32-34, drawn to a DNA construct, classified in class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

a) Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to a transgenic plant transformed with a nucleotide sequence encoding a protein allergen and a DNA construct encoding a modified protein variant. The DNA construct is broadly directed to any protein variant while the transgenic plant is directed specifically to a protein allergen. Thus, these products are unrelated structurally. Since DNA function is directly associated with function, these products would be unrelated in operation, function and effect.

Art Unit: 1638

b) Inventions I and II are related as product and process of making. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for making the product as claimed can be used to make another materially different product or (2) the product as claimed can be made by a materially different process (MPEP § 806.05(f)). In the instant case product can be made by a materially different process such as one in which the protein allergen epitopes are mapped, the nucleic acid encoding the protein is mutated to remove one of the epitopes, the mutated nucleic acid is then used to transform a plant cell and regenerated to form the transgenic plant.

Because these inventions are distinct for the reasons given above and the literature search required for one group is not required or not co-extensive for any other group, and therefore burdensome, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
